EDUCATION

UNIVERSITY COLLEGE LONDON

Master of Engineering in Robotics and Artificial Intelligence

Second-Year Results: 84.27% (1st Class)

Modules: Object-Oriented Programming, Introduction to Machine Learning

London, UK

2023 - 2027

ST OLAV VGS

International Baccalaureate Diploma Programme

- Grade: 41/45 with Maths AA HL - 7 and Physics HL - 7

Stavanger, Norway

2021 - 2023

KEY SKILLS

- Python, Pytorch, TensorFlow, MATLAB, LangGraph, CAD, Computer Vision, SciPy, NumPy

EXPERIENCE

NATIONAL CENTER FOR ARTIFICIAL INTELLIGENCE AND ROBOTICS

Abuja, Nigeria

Robotics Intern

August 2025 - September 2025

- Prototyped an agricultural robot with Wi-Fi monitoring, developed seed-dispensing and furrow-opening mechanisms, and implemented GPS-IMU-Encoder sensor fusion with a Kalman filter for precise navigation.
- Enhanced planting efficiency and harvest outcomes by designing a method that increases accuracy and maintains high throughput compared to traditional farming practices in rural Nigeria.

CISCO

London, UK

Agentic AI Engineering Intern

April 2025 – July 2025

- Four-month placement with Outshift by Cisco
- Designed and implemented an agentic workflow using LangChain and LangGraph, enabling modular coordination of LLM-based agents for design generation, refinement, 3D printing and supervision

GOOGLE

London, UK

BGN Hackathon - Spotlight' By Gemi9 (Backend-Python)

October 2024 - October 2024

- Collaborated in a team of five university students to implement a web application to highlight contributions of Black innovators in engineering; Achieved 1st place and "People's Choice" among ten competing teams.
- Utilised Google Cloud Vision AI to detect objects in real-time and Gemini API to retrieve contextual data from reliable web sources, integrated with Cloud Storage Triggers to automate image processing workflows.

PROJECTS

INTRODUCTION TO MACHINE LEARNING MODULE (COMP0214)

London, UK

(Python)

November 2024 - December 2024

- Developed a binary classification model using sci-kit learn to analyse navigation patterns and differentiate individuals with Alzheimer's disease from a control group.
- Engineered and trained a neural network with Pytorch for regression to accurately predict indoor X-Y coordinates using RSSI values from WI-FI access points, with an error of 0.60 MPE.

ASL FINGER SPELLING TRANSLATOR

London, UK

(Python)

August 2024 - September 2024

- Trained a Tensorflow model to classify ASL letters in real-time, leveraging Google's MediaPipe API for hand landmark detection and computer vision with OpenCV.

EDX

London, UK

CS50's Introduction to Artificial Intelligence with Python

June 2024 - September 2024

- Leveraged TensorFlow to design and build a Convolutional Neural Network for computer vision, specifically for classifying road signs with a 95% accuracy.

EXTRACURRICULARS

- Music: Clarinettist in All-Souls Orchestra; former member of Regional Youth Symphony Orchestra (Rogaland, Norway)
- Campus Societies: Jazz Society, Computer Science Society and AI Society
